MedScan AI - Run Instructions

BBIS 7502 Applied Project | ICL Graduate Business School, Auckland, New Zealand

Student: Saroj Kumar Tamang | Student ID: 108579

This system is not a medical device, has not been clinically validated, and must not be used for real clinical decisions.

Prerequisites

- Python 3.10 or above
- MySQL 8.0 installed and running locally
- Google account for OAuth login
- Google Gemini API key from https://aistudio.google.com
- Google OAuth credentials from https://console.cloud.google.com

Setup Instructions

Step 1 - Install dependencies

```
pip install -r requirements.txt
```

Step 2 - Add your Gemini API key

```
Open app.py and replace:
api_key = "YOUR_GEMINI_API_KEY"
```

Step 3 - Add your database password

```
Open app.py and replace:
password = "YOUR_DB_PASSWORD"
```

Step 4 - Set up Google OAuth credentials

```
Copy secrets.toml.template to .streamlit/secrets.toml
Fill in YOUR_GOOGLE_CLIENT_ID and YOUR_GOOGLE_CLIENT_SECRET
Register http://localhost:8501/oauth2callback as an authorised redirect URI in
Google Cloud Console.
```

Step 5 - Set up the database

```
mysql -u root -p < database_setup.sql
```

Step 6 - Run the application

```
streamlit run app.py
```

Step 7 - Open the application

```
Open browser at http://localhost:8501
```

File Structure

File	Description
app.py	Main application file
requirements.txt	Python dependencies
secrets.toml.template	OAuth credentials template
README.pdf	Run instructions
code_change_summary.pdf	Summary of changes from baseline
database_setup.sql	MySQL database setup script

testing_results.xlsx	Full testing results spreadsheet

Baseline Source

- Repository: https://github.com/simranjeet97/Awsome_AI_Agents
- Author: Simranjeet Singh (simranjeet97)
- Folder: GenAI_Medical_Imaging_Agent
- Licence: Apache 2.0

Important Notes

- Gemini 2.5 Flash free tier allows 20 requests per day
- API keys and OAuth secrets are not included in this ZIP for security reasons
- All testing used publicly available de-identified proxy datasets from Kaggle
- No real patient data was used at any point in this project
